1. Go to sqldbxx open server: jd003 database: SidingProductManagement

The screenshot shows the SQL Server Enterprise Manager interface. The left pane displays the 'System Objects' tree with 'Tables (36)' expanded. The right pane shows a query window with the following SQL:

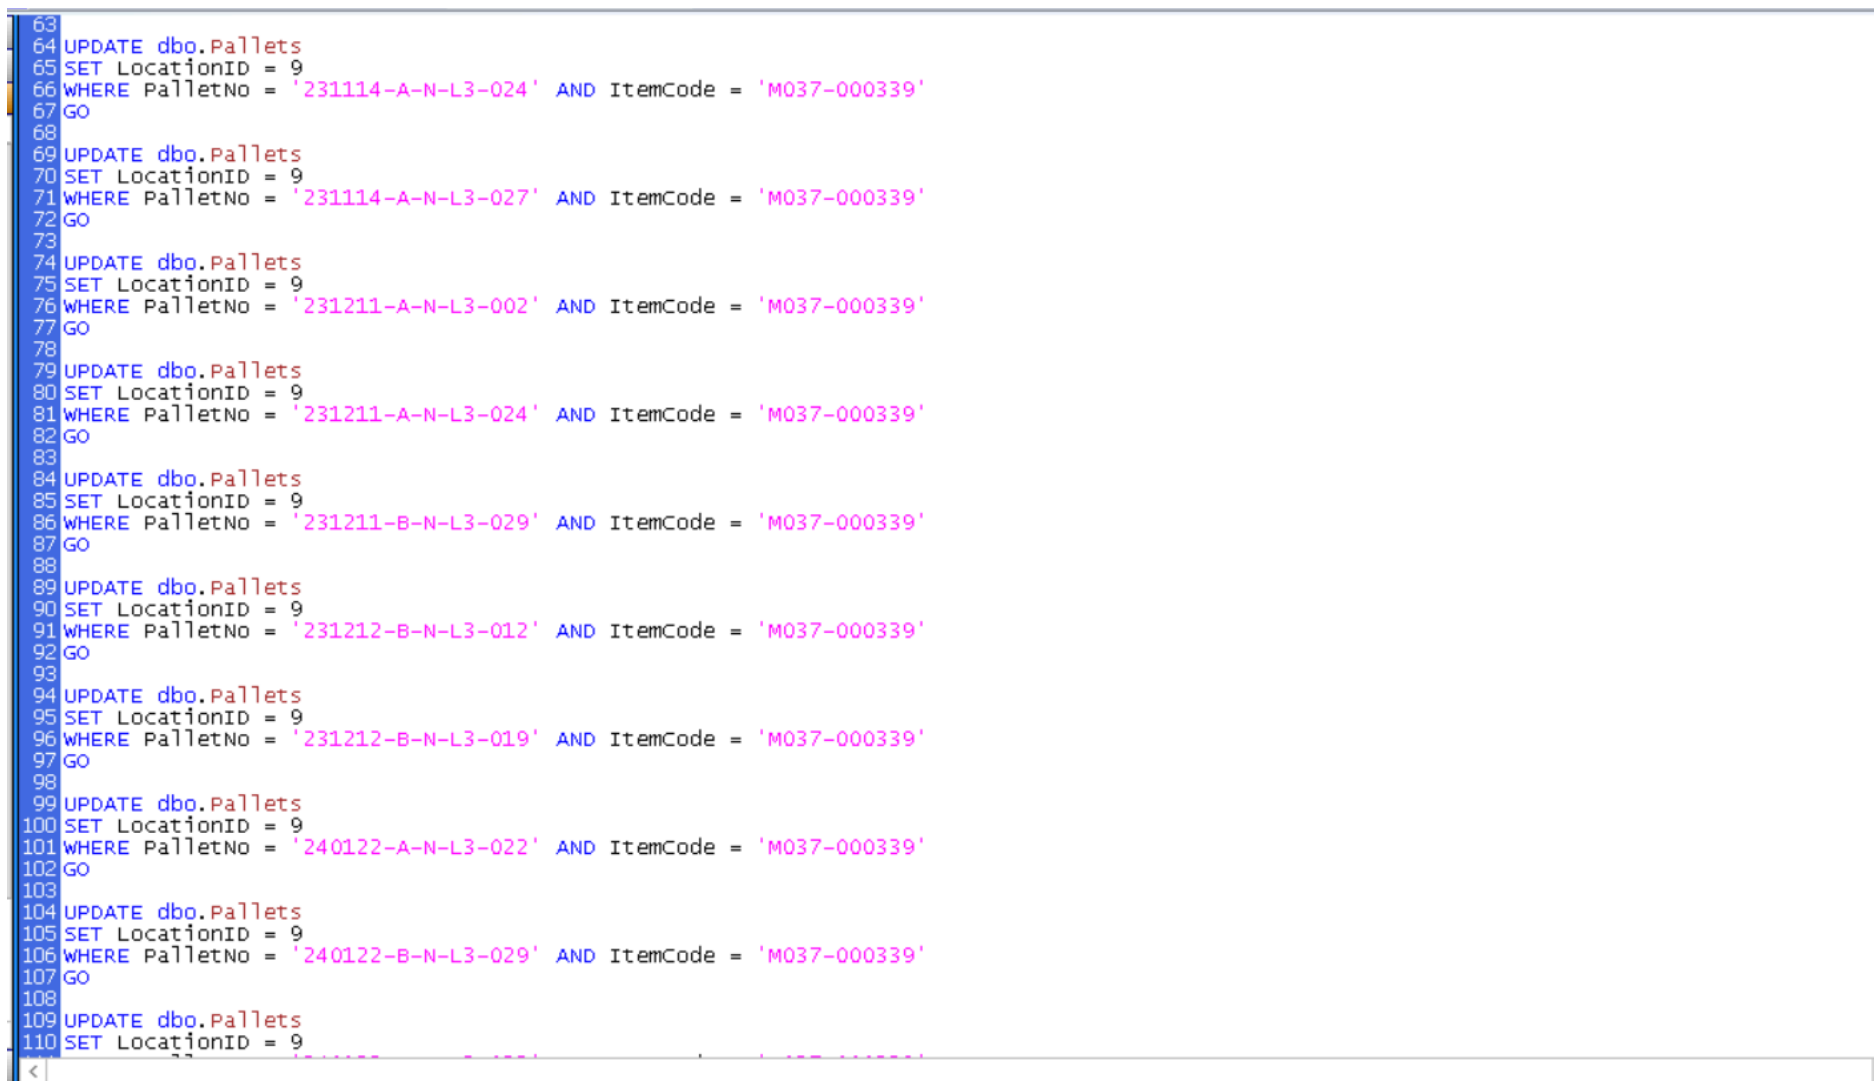

```
1 SELECT * FROM Pallets WHERE PalletNo IN (
2 '240123-B-N-L3-005',
3 '240123-A-N-L3-022',
4 '240122-B-N-L3-029',
5 '240122-A-N-L3-022',
6 '231212-B-N-L3-019',
7 '231212-B-N-L3-012',
8 '231211-B-N-L3-029',
9 '231211-A-N-L3-002',
10 '231211-A-N-L3-002',
11 '231114-A-N-L3-027',
12 '231114-A-N-L3-024'
13 )
```

Below the query window, the 'Script8*' tab displays the results of the query in a table format:

2. Create a backup before updating, simply generate a insert query

3. Generate update query and change the location ID to 4

The screenshot shows a SQL script with the following queries:
